Monte Carlo through age 95

10,000 paths per scenario | Funded means spending and tax are met without using the home.

Compound target	Joint → Stacey	Ian alone	Stacey alone	10th | 2053	Median | 2053
6.4% IRAs / 7% shares	100.00%	100.00%	100.00%	$2,061,451	$4,511,818
6% mixed / 6.5% shares	100.00%	100.00%	100.00%	$1,813,101	$3,974,056
5% investments	100.00%	100.00%	100.00%	$1,364,421	$3,022,853
0% investments	91.50%	99.28%	89.68%	$26,530	$573,184

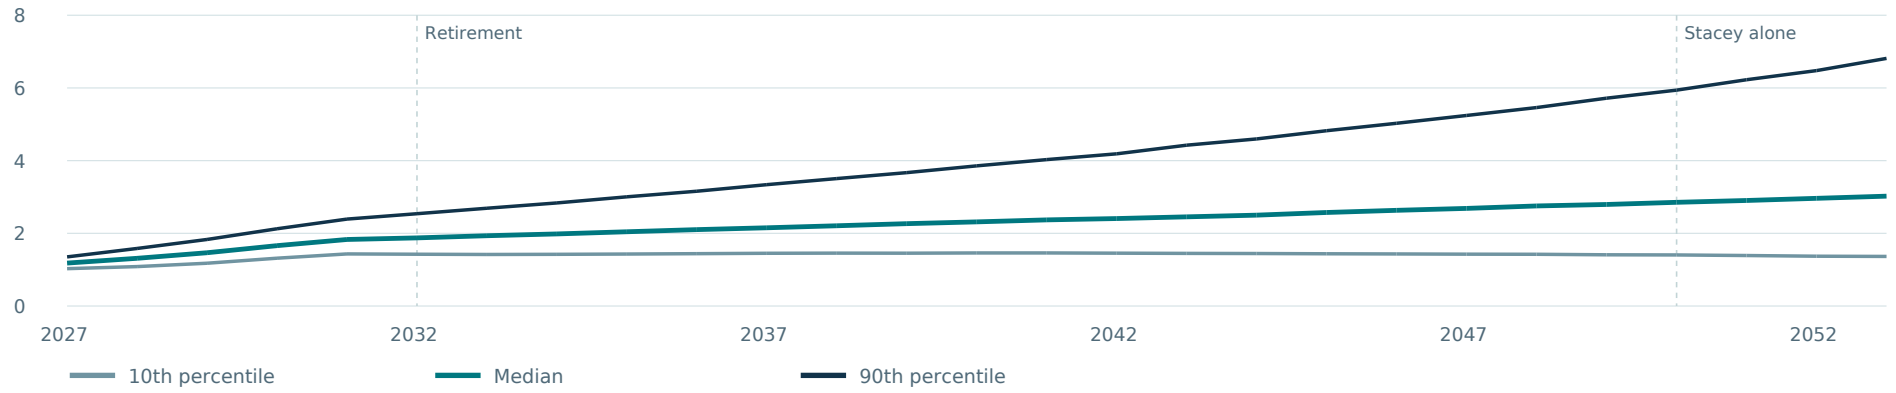

Joint-then-Stacey ending assets are shown for 2053; survivor-only cases use their own end year.

Joint, then Stacey | 5% compound investment target

10,000 / 10,000 funded

5% CASE | INVESTABLE ASSETS

2027–2053 | future $ millions

CRASH TEST | 5% CASE

Joint then Stacey · 2053 assets, $m

Scenario	10th	Median	Funded
No imposed crash	$1.36	$3.02	100%
2027 crash	$0.79	$1.77	100%
2032 crash	$0.76	$1.65	100%

Shares −35%, then 0% for three years.
Treasuries 0% in crash year, then 5%; IRAs 70/30.
2027–31 cash flows fixed apart from RMDs.
Conditional scenarios; SIPP / 401(k) modeled as equity.

YEAR-END ASSETS

Future dollars | millions

Year	Ian / Stacey	10th	Median	90th
2027	73 / 69	$1.03	$1.18	$1.35
2032	78 / 74	$1.43	$1.87	$2.54
2037	83 / 79	$1.45	$2.15	$3.34
2042	88 / 84	$1.45	$2.41	$4.19
2047	93 / 89	$1.43	$2.69	$5.24
2052	98 / 94	$1.37	$2.96	$6.48
2053	99 / 95	$1.36	$3.02	$6.81

Ages for reference; retirement assets before withdrawal tax.
